 Portfolio

 Bengaluru, Karnataka

CORE COMPETENCIES

Software Development Lifecycle

RESTful API Development

Production Issue Resolution

System Enhancement & Optimization

Scalable Microservices Development

Application Maintenance & Troubleshooting

Business Requirement Analysis

Continuous Improvement

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, C++, Python

Frameworks: Spring Boot, Spring Cloud, Spring Security, React.js, Redux Toolkit

AWS Cloud: Lambda, EC2, S3, RDS, DynamoDB, SQS, SNS, API Gateway, ECS/Fargate, ECR, CloudWatch, CodeBuild, CodeDeploy, IAM

Databases: PostgreSQL, MySQL, DynamoDB

DevOps & Tools: Docker, Git, Maven, Gradle, GitHub Actions, CI/CD

Testing & API: JUnit 5, Mockito, Postman, Swagger/OpenAPI

Concepts: REST APIs, JWT, OOP, DSA, HLD, LLD, Agile/Scrum

EDUCATION

B.Tech. in Computer Science Engineering, GIET University, Gunupur, CGPA: 8.45, 2023

SAMBIT KUMAR BHANJADEO

Java Backend Developer | Full Stack Development

PROFILE SUMMARY

- Backend Engineer with 3+ years of experience in the SDLC**, building and enhancing Java-based applications across development, integration, testing, deployment, & production support.
- Hands-on expertise in Java, Spring Boot, microservices, AWS, and SQL**, with a strong focus on clean architecture, secure APIs, system reliability, performance, & continuous delivery.

WORK EXPERIENCE

Calsoft, Bengaluru | Jul 2023 - Present

Growth Path:

Intern | Aug 2022 – Jun 2023

Development Engineer | Jul 2023– Present

Key Result Areas: Development Engineer

- Delivered scalable microservices-driven vehicle remarketing solutions for global automotive leaders including BMW, Volkswagen, Honda, Hyundai, and GMF, contributing to seamless business operations and enhanced platform reliability.
- Architected secure RESTful API frameworks and JWT-based authentication mechanisms, strengthening application security and enabling efficient, compliant data exchange across enterprise systems.
- Spearheaded backend enhancement initiatives, driving feature rollouts, defect remediation, and system performance improvements that optimized application efficiency by 30% and elevated user experience.
- Diagnosed and resolved 20+ production incidents through log analysis and SQL-based root cause investigations, reducing resolution time and improving service availability.
- Championed Agile development best practices by conducting code reviews, ensuring adherence to quality standards, and collaborating with cross-functional teams to accelerate delivery cycles while maintaining high code quality.

Intern:

- Engineered and validated high-performance RESTful APIs leveraging Java, Spring Boot, React, and SQL, delivering scalable and reliable enterprise application functionality.
- Orchestrated API testing and quality assurance using Postman, while driving code review excellence and actively contributing to Agile sprint planning, stand-ups, and delivery initiatives.

KEY PROJECTS

Event-Driven Notification System | Spring Boot, AWS SQS/SNS, Lambda, DynamoDB,

Docker

- Designed and developed an event-driven notification platform on AWS using Spring Boot, SNS, SQS, Lambda, and DynamoDB for high-throughput asynchronous messaging.
- Implemented SNS fan-out, SQS-based processing, retries, DLQs, and idempotency controls to ensure reliable message delivery and fault tolerance.
- Automated containerized deployments with Docker and AWS CI/CD; integrated API Gateway, CloudWatch, and Parameter Store for secure operations and observability.

Secure File Upload Service | Spring Boot, AWS S3, EC2, RDS, Docker

- Built a stateless file upload service using Amazon S3 pre-signed URLs with PostgreSQL metadata tracking for secure and scalable file handling.
- Deployed on Amazon EC2 with IAM-based access control and Amazon RDS (PostgreSQL), ensuring secure access and operational reliability.

Expense Tracker (Microservices) | Spring Boot, Spring Cloud Gateway, Kafka, JWT

- Developed a microservices-based expense management application with Spring Cloud Gateway and JWT-based role-based access control (RBAC).
- Enabled asynchronous service communication using Apache Kafka for reliable event-driven workflows.
